

Move to All Electric

save money and help the planet

Burning natural gas increases greenhouse gases

Leaking natural gas is even worse

Use electricity instead!
It's easy!

Solar panels, with or without a **battery**, or **opt for 100% renewable** from your electricity provider

Electric car – the single biggest impact a driver can make

Electric stove – opt for induction which turns on and off just like gas

Electric dryer – use high efficiency electric appliances

Heat pump – for hot water, heat and air conditioning; heat pumps are four times more efficient than resistance, AND it's cheaper than gas

Your all electric house does not need a natural gas supply pipe, which can leak. Natural gas is a very powerful greenhouse gas.
